

Scalability & Future Plan

Date	29 September 2026
Team ID	SWTID-2026-7510
Project Name	A CRM Application for TheChaiShop&Co
Maximum Marks	1 Mark

Scalability & Future Plan:

This document outlines how the current project solution can be scaled to handle larger user bases, increased data loads, or extended features in the future. It also captures the team's roadmap for enhancing and evolving the project beyond its current state.

Current System Limitations:

S.No	Limitation	Impact	Priority to Address (High / Medium / Low)
1	Product prices are hard-coded inside formula fields, and each product is counted only once per order (multi-select picklists).	Price changes need formula edits, and orders with multiple units of one item cannot be billed accurately.	High
2	Needs Salesforce licenses and a stable internet connection; offline access is limited.	Running cost grows with users, and staff cannot work during network outages.	Medium
3	Only birthday emails are automated; no SMS/WhatsApp alerts, order receipts or stock tracking.	Limited customer engagement and no visibility of tea and biscuit stock levels.	Medium

Scalability Plan:

S.No	Scalability Aspect	Current State	Proposed Upgrade / Solution
1	User Load	Developer Edition org with a small team of users, mainly System Administrator access.	Move to a paid Salesforce edition with more licenses, role hierarchy and profiles; add multi-branch support.
2	Data Storage	Small volume of test records in a Developer org with limited storage.	Archive old orders, schedule regular data export backups and upgrade storage as records grow.
3	Performance	Long IF formulas on multi-select picklists; simple reports and dashboards.	Create Product and Order Item objects (Master-Detail) with roll-up summaries, use indexed fields and filtered reports.
4	Security	Login, validation rules and basic profile-based access.	Use permission sets, field-level security for Aadhar, PAN and salary, multi-factor authentication and backups.

Future Roadmap:

Phase	Planned Feature / Enhancement	Target Timeline	Expected Impact
Phase 2	Mobile CRM access for staff; WhatsApp/SMS alerts and order receipts.	Oct - Dec 2026	Faster order entry on the shop floor and better customer communication.
Phase 3	Inventory management for tea and biscuit stock; Product and Order Item objects for exact billing.	Jan - Mar 2027	Accurate billing for any quantity, fewer stock-outs and less wastage.
Phase 4	AI-based sales prediction and multi-branch support.	Apr - Jun 2027	Better planning of stock and offers, and one CRM for all branches.
