UserStory:

As a sales representative at TheChaiShop&Co, I need a reliable CRM application to easily manage customer relationships and streamline our daily sales process.

I want the ability to view and update employer details, as well as clearly separate online from walk-in customers using different record types so we can personalize our service.

The system should automatically calculate order quantities and total bill amounts to ensure fast and accurate checkout transactions.

Furthermore, I require access to clear reports and dashboards to summarize and analyze our sales data effectively, and the application must automatically send personalized birthday emails with special offers to keep our customers engaged and loyal.

1. INTRODUCTION

1.1 Project Overview :

The "A CRM Application for TheChaiShop&Co" project focuses on creating a customized Customer Relationship Management (CRM) system using the Salesforce platform. The system is designed to organize customer, employer, and company account information in one place. By keeping these records together, the application

makes the sales process easier, keeps data accurate, helps create useful reports, and improves customer service through automatic email messages.

1.2 Purpose :

The main goals of this project are to:

- Organize and manage all customer relationship activities in one place.
- Reduce manual work by automatically calculating invoices and order totals.
- Reduce human mistakes and improve the accuracy of entered data.
- Help management use reports and dashboards to make better business decisions.
- Improve customer loyalty through automatic and personalized emails.

2. IDEATION PHASE

2.1 Problem Statement (Customer Problem Statement Template)

- **Persona:** Retail Sales Representative

Current Obstacle: Forced to manually calculate cart totals and order quantities using physical ledgers or basic spreadsheets.

Business Impact: High frequency of arithmetic errors, slow checkout times, and severe operational anxiety during peak hours.

System Requirement: Automated formula fields for instantaneous cart tallying and invoice generation.

- **Persona:** Store Director / General Manager

Current Obstacle: Sales data is fragmented across multiple offline files, making it impossible to pull real-time revenue metrics.

Business Impact: Strategic paralysis. Decisions are made using delayed, incomplete, or inaccurate historical data.

System Requirement: Unified Lightning Dashboards and automated reporting matrices.

- **Persona:** The Consumer (Retail & B2B)

Current Obstacle: Zero post-purchase engagement or personalized brand communication.

Business Impact: Low brand loyalty and minimal repeat business.

System Requirement: Time-triggered automated email workflows utilizing personalized templates

2.2 Empathy Map Canvas

Target Users

- Retail Sales Staff,
- Operations Managers,
- System Administrators,
- Business Analysts.

Empathy Analysis

2.2 Empathy Map Canvas

Empathy Quadrant	Core Observations & Insights
Thinking & Feeling	Frustrated by slow manual workflows; anxious about making pricing or billing errors; eager for a reliable platform that provides instant, accurate data.
Hearing	Directives from leadership to improve data tracking; coworkers venting about lost files or crashing spreadsheets; occasional customer grumbles regarding slow checkout times.
Seeing	Cluttered counter spaces with physical ledgers; fragmented and disconnected Excel spreadsheets; disorganized client contact lists across multiple devices.
Saying & Doing	Apologizing for invoicing delays; typing identical customer details into multiple unlinked systems; spending hours

	manually compiling end-of-day performance metrics.
Pain Points	High risk of mathematical errors; severe data silos leading to misplaced information; massive time wasted on redundant administrative tasks.
Gain Points	One-click automated billing; centralized, instantly accessible customer profiles; real-time visual dashboards; reclaimed time to focus on actual customer engagement.

2.3 Brainstorming

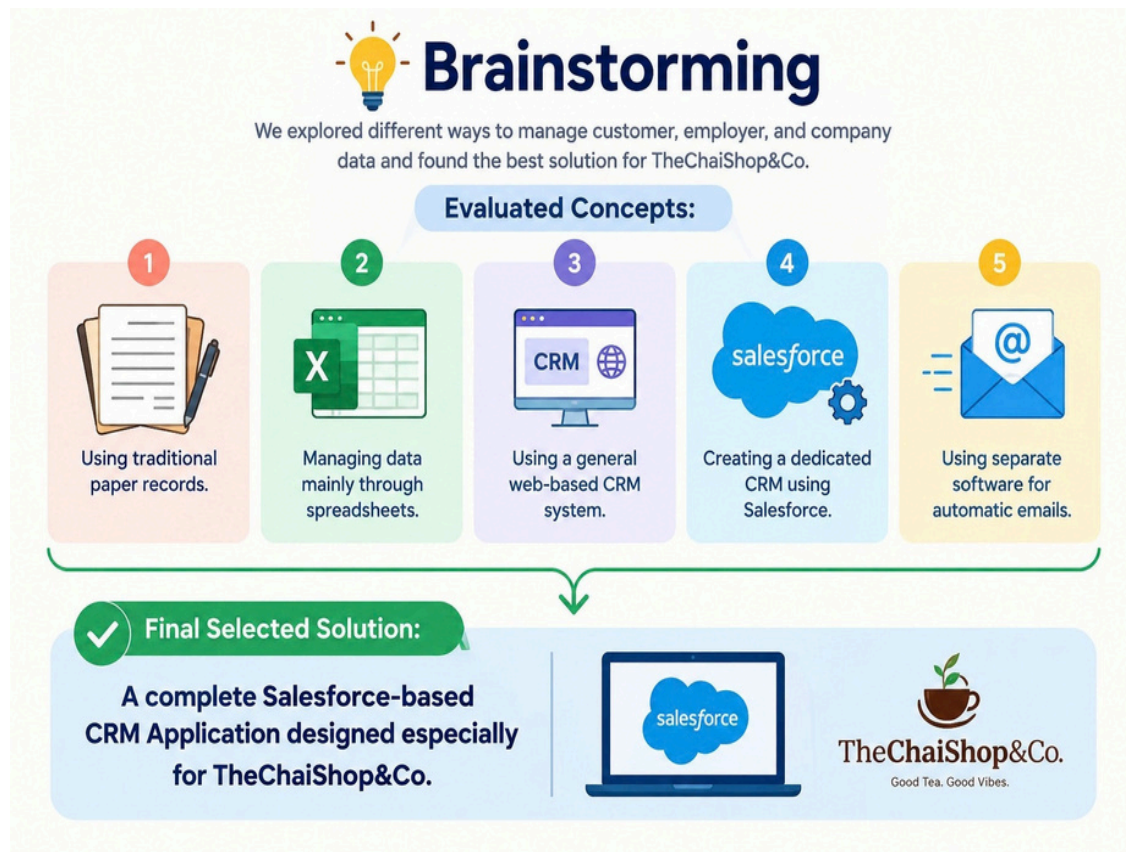

Evaluated Concepts:

- Using traditional paper records.
- Managing data mainly through spreadsheets.
- Using a general web-based CRM system.
- Creating a dedicated CRM using Salesforce.

- Using separate software for automatic emails

Final Selected Solution:

A complete Salesforce-based CRM Application designed especially for TheChaiShop&Co.

3. REQUIREMENT ANALYSIS PHASE

3.1 Customer Journey Map

Operational Stages:

- User Login and System Authentication
- Open the CRM Interface
- Enter Customer Details and Information
- Create and Process Orders
- Automatically Calculate Billing
- View Reports and Analytics
- Make Business Decisions

3.2 Solution Requirements

Functional Specifications

Requirement ID	Specification Details
FR-1	Secure user login and identity verification.
FR-2	
	Creation and setup of custom objects for business information.
FR-3	Simple and organized data entry forms.
FR-4	Automatic invoice and order calculations.
FR-5	Creation of reports for analyzing business data.
FR-6	Automatic email notifications based on set conditions.

Non-Functional Specifications

Requirement ID	Requirement & Description
----------------	---------------------------

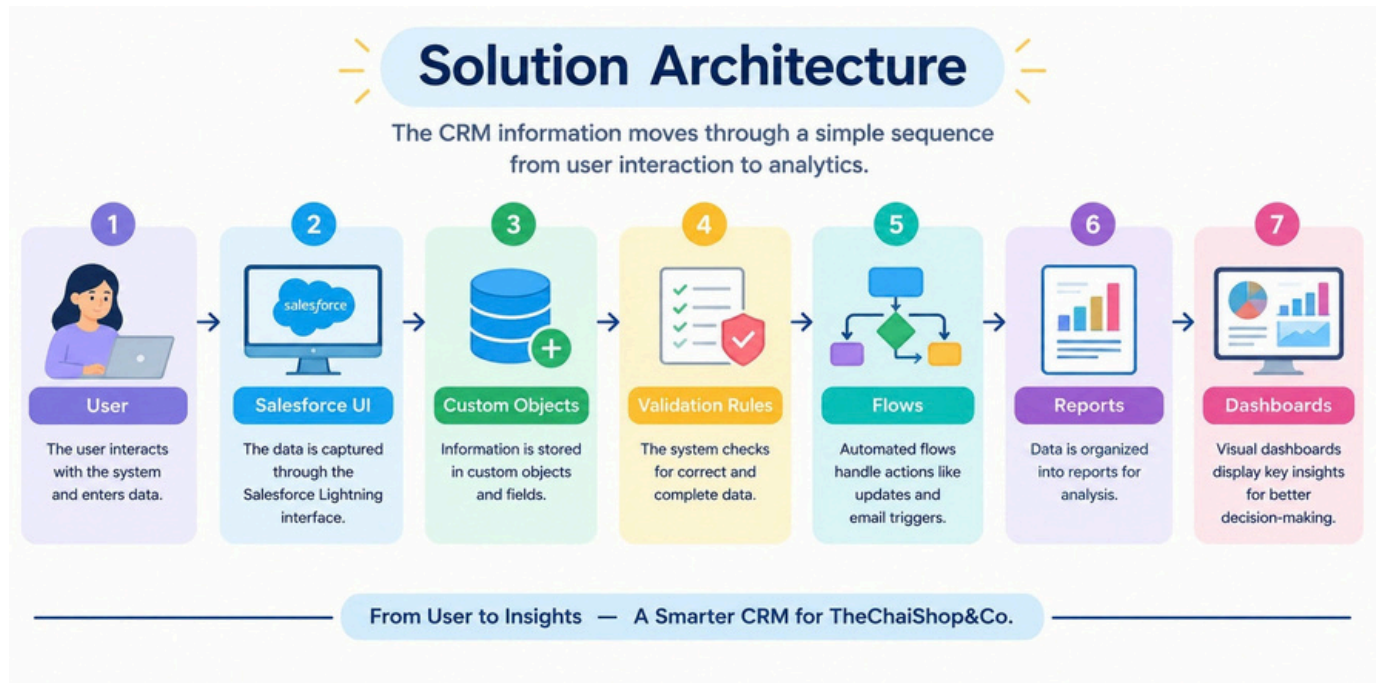

NFR-1	Usability: Easy for employees to use without advanced technical training. Simple interface, clear menus, easy forms, easy dashboards.
NFR-2	Security: Protect business and customer information from unauthorized access. User-based access, secure login, protected storage, backups.
NFR-3	Reliability: Work properly and protect information from being lost or damaged. Automatic saving, backup, error handling, reliable cloud storage.
NFR-4	Performance: Load quickly and handle large amounts of data without major delays. Fast pages, quick processing, smooth dashboards, low delay.
NFR-5	Availability: Remain accessible whenever users require it. 24/7 access, disaster recovery, cloud hosting, minimum downtime.

NFR-6	Scalability: Grow with the business without becoming slow. More users, large data volumes, flexible storage, continued performance.
-------	--

3.3 Data Flow Diagram

The CRM information moves through a simple sequence from user interaction to analytics.

User → Salesforce UI → Custom Objects → Validation
Rules → Flows → Reports → Dashboards

3.4 Technology Stack

Layer	Technology Salesforce
Frontend	Lightning Salesforce
Database	Cloud Salesforce Flows
Automation	Salesforce Platform
Backend	Reports & Dashboards
Analytics	

4. PROJECT DESIGN PHASE

4.1 Problem-Solution Fit

This CRM system replaces error-prone paper records with a digital system that can manage data automatically. Cloud storage reduces the risk of losing important information, while dashboards make business data easier to understand. Reports can be created quickly, reducing delays and helping managers receive accurate business information when they need it.

4.2 Proposed Solution

Functional Parameter	Technical Description
Authentication Protocols	Allows authorized staff to securely enter the system using their login details.
Client Database Control	Allows staff to create, view, update, and delete customer details such as names, phone numbers, and addresses.
Corporate Account Administration	Helps manage business and employer account information.
Pipeline Management	Helps create and track orders, including quantities and product types.
Algorithmic Invoicing	Uses formula fields to automatically calculate the final amount based on quantity and product price.

Functional Parameter	Technical Description
Data Integrity Rules	Ensures correct data entry by setting rules for important fields such as phone number, PAN, and Aadhaar.
Dynamic Page Layouts	Provides different page layouts for different customer types, such as Online and Walk-In customers.
Universal Picklists	Keeps data consistent using fixed dropdown options for products, categories, and order status.
Automated Mailing Protocols	Automatically sends emails for birthdays, offers, and order receipts.
Trigger-Based Automation	Reduces repeated manual work by using Salesforce Flows to update records and send alerts.
Analytics Engine	Provides information about sales, customer retention, and business accounts.
Visual Telemetry	Shows important business information through clear and interactive dashboards.
Archival & Restoration	Helps keep business data safe and allows it to be recovered when required.
Permissions Architecture	Controls what different staff members can see and do based on their roles.

4.3 Solution Architecture

System Tiers:

- Presentation Layer: Salesforce Lightning Experience (User Interface)
- Application Layer: Salesforce Logic and Automated Flows
- Data Layer: Custom Objects and Fields
- Analytics Layer: Reports and Visual Dashboards
- This multi-level structure makes the system easier to manage, expand, and maintain in the future.

5. PROJECT PLANNING & SCHEDULING

5.1 Project Planning Overview

- The project was developed using Agile methods, with work divided into sprints and planned delivery stages.
- A Salesforce Developer Edition org was created for developing the project.
- Custom Objects were used to store Customer, Employer, and Enterprise information.
- Custom Tabs and one Lightning App were used for navigation.
- Fields, field types, relationships, and Global Value Sets were created to organize stored data.
- Page Layouts and Record Types were created for different users and order types.
- Validation Rules were added to prevent incorrect data.
- HTML Email Templates and Flow triggers were created for automated customer emails.
- Reports and Dashboards were created to monitor sales and revenue.

- Testing was performed at different stages to identify and fix errors.

Product Backlog, Sprint Schedule, and Estimation

Sprint	Epic/Area	Actionable Task	Priority	Assignee
Sprint-1	Infrastructure Setup	Create Salesforce Developer org for the CRM.	Critical	Naziya
Sprint-1	Schema Design	Create Custom Objects for Customers, Employers, and Enterprises.	Critical	Sania
Sprint-2	Interface Navigation	Create separate navigation tabs for each main object.	Critical	shilpa
Sprint-2	Application Assembly	Create one Lightning Application containing CRM tools.	Critical	kinza
Sprint-2	Field Architecture	Create billing, customer, contact, and product fields.	Moderate	kowsalya
Sprint-2	UI Customization	Create simple Page Layouts with required order information.	Critical	sania
Sprint-2	Record Categorization	Create Record Types for Walk-In and Online customers.	Moderate	Kinza and shilpa

Sprint	Epic/Area	Actionable Task	Priority	Assignee
Sprint-3	Data Integrity Automation	Check customer and order information before saving.	Critical	kowsalya
Sprint-3	Outreach Automation	Use Flows to send promotional emails based on dates.	Critical	kinza
Sprint-4	Financial Automation	Calculate order totals and invoices with formula fields.	Critical	shilpa
Sprint-5	Analytics Engineering	Create reports showing transaction details and sales trends.	Critical	sania
Sprint-6	Data Visualization	Create dashboards for sales, revenue, and customer information.	Moderate	naziya

6. PROJECT DEVELOPMENT

PHASE Development Workflow & Milestones

Milestone 1: Set up the Salesforce Environment

Milestone 2: Create Custom Objects

Milestone 3: Create Navigation Tabs

Milestone 4: Build the Custom Lightning App

Milestone 5: Create Global Value Sets (Picklists)

Milestone 6: Create Fields and Database Relationships

Milestone 7: Design the User Interface Layouts

Milestone 8: Create different

Record Types

Milestone 9: Add Data Validation Rules

Milestone 10: Create HTML Email Templates

Milestone 11: Build Automated Flows

Milestone 12: Create Reports and Dashboards

Milestone 13: Complete Testing

and Documentation

Core Competencies Mastered

During this project, important Salesforce administration skills were learned and used. These included

- Designing the system structure, working with standard and custom objects,
- creating picklists,
- creating relationships between objects using Lookup and Master-Detail fields
- customizing Page Layouts and Record Types, using Validation Rules to check data,
- creating automated emails and Flows, and
- creating reports and dashboards for data analysis.

implementation procedures

The following pages present the implications activities in a simple step-by-step formats

Milestone 1:set up the Salesforce environment

- Open the Salesforce Developer signup website.
- Fill in the registration form with the required personal and regional information, select the role as 'Developer', and
- create a unique username.

Build for the Agentic Enterprise. Sign up for your Developer Edition.

The entire Salesforce platform - exposed as APIs, MCP tools, and CLI commands. Build apps, ship agents, and let coding agents do the heavy lifting with Salesforce Headless 360.

- ✓ Build AI agents with Agentforce, grounded in your data with Data 360
- ✓ Connect Claude Code, Cursor, or Codex to your org with hosted MCP
- ✓ Build in the browser with the Agentforce Vibes IDE - no setup required
- ✓ Drag-and-drop when you want it, Apex when you need it
- ✓ 60+ MCP tools and 30+ coding skills, ready out of the box

Sign up for your Developer Edition

A free Salesforce Platform environment with Agentforce and Data 360

Sign me up

- Open the verification email, verify the account, create a

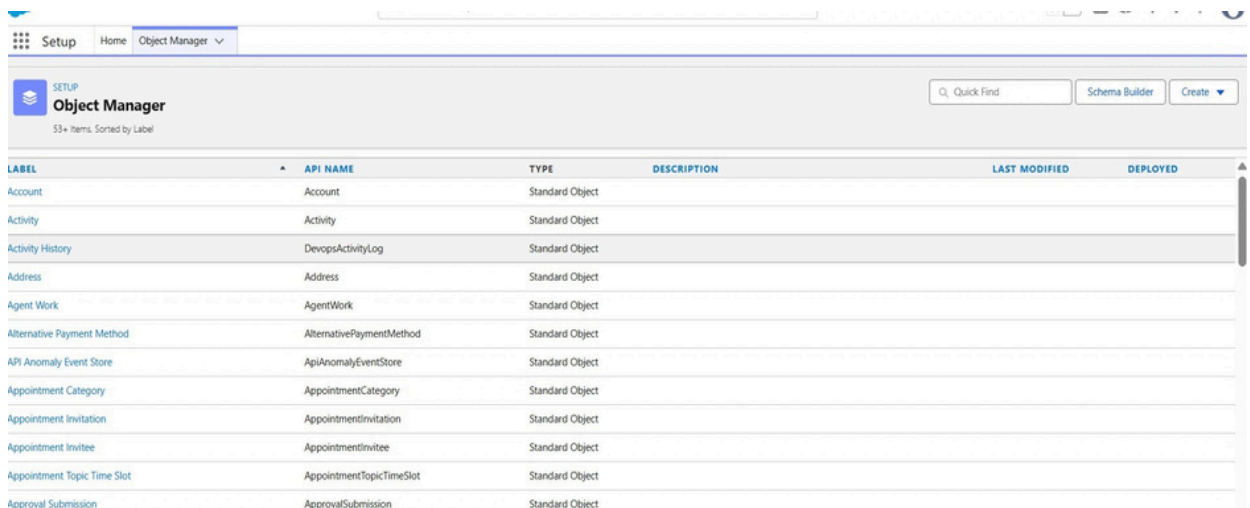

secure password, and set the required security questions.

Milestone 2: Create Custom Objects

- Open Salesforce Setup and go to Object Manager.

- Select Create > Custom Object.

A. Employer Account Object

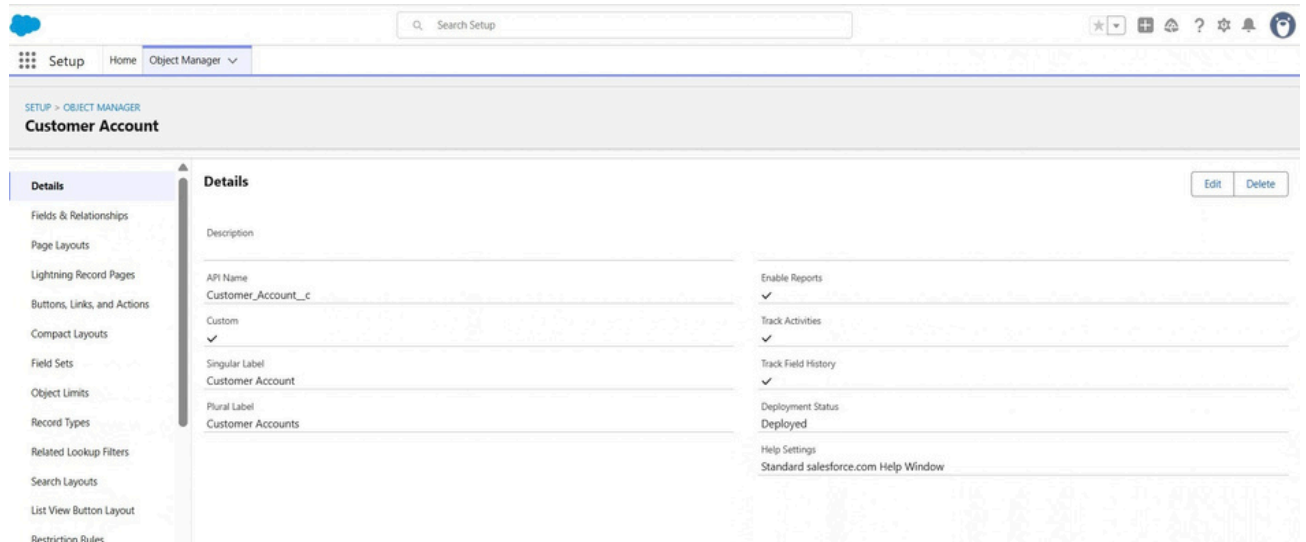

- Navigate to Setup → Object Manager → Create → Custom Object.

- Label: Employer Account | Plural Label: Employer Accounts
- Record Name: Employer Account Name | Data Type: Text
- Optional Features: Enable Allow Reports, Allow Activities, Track Field History, and Allow Search.
- Click Save.

The screenshot shows the Salesforce Object Manager interface for a custom object named 'Employer Account'. The left sidebar contains a navigation menu with options: Details (selected), Fields & Relationships, Page Layouts, Lightning Record Pages, Buttons, Links, and Actions, Compact Layouts, Field Sets, Object Limits, Object Limits, Record Types, Related Lookup Filters, and Search Layouts. The main content area is titled 'Details' and includes a description field, an API Name field (containing 'Employer_Account_c'), a Custom checkbox (checked), a Singular Label field (containing 'Employer Account'), a Plural Label field (containing 'Employer Accounts'), and a list of optional features: Enable Reports (checked), Track Activities (checked), Track Field History (checked), Deployment Status (Deployed), and Help Settings (Standard salesforce.com Help Window). At the top right of the main content area are 'Edit' and 'Delete' buttons.

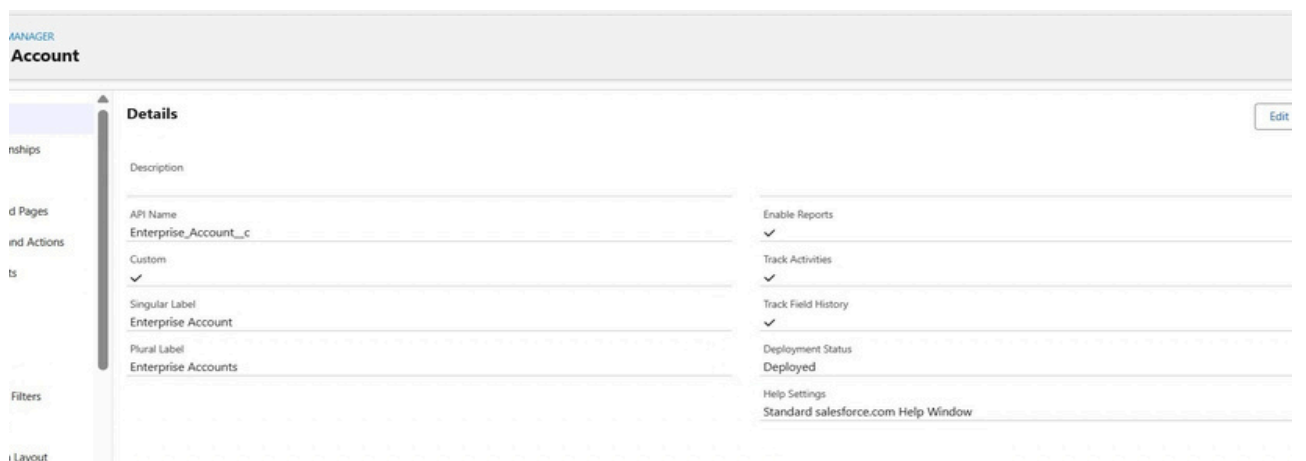

B. Customer Account Object

- Return to Object Manager → Create → Custom Object.
- Label: Customer Account | Plural Label: Customer Accounts
- Record Name: Customer Account Name | Data Type: Text
- Enable all Optional Features and Search capabilities.
- Click Save.

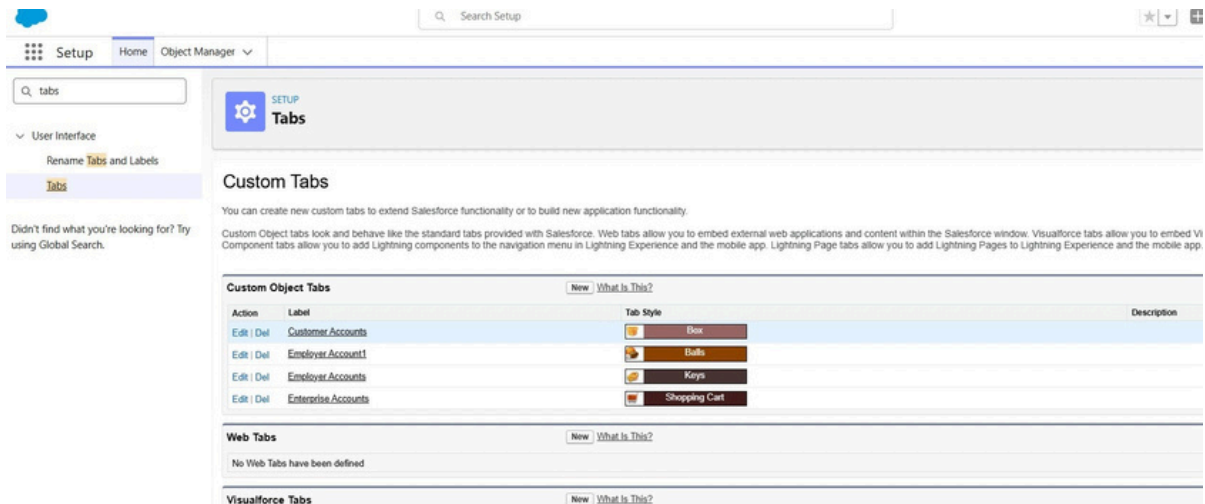

C. Enterprise Account Object

- Return to Object Manager → Create → Custom Object.
- Label: Enterprise Account | Plural Label: Enterprise Accounts
- Record Name: EnterpriseAccount Name | Data Type: Text
- Enable all Optional Features and Search capabilities.
- Click Save.

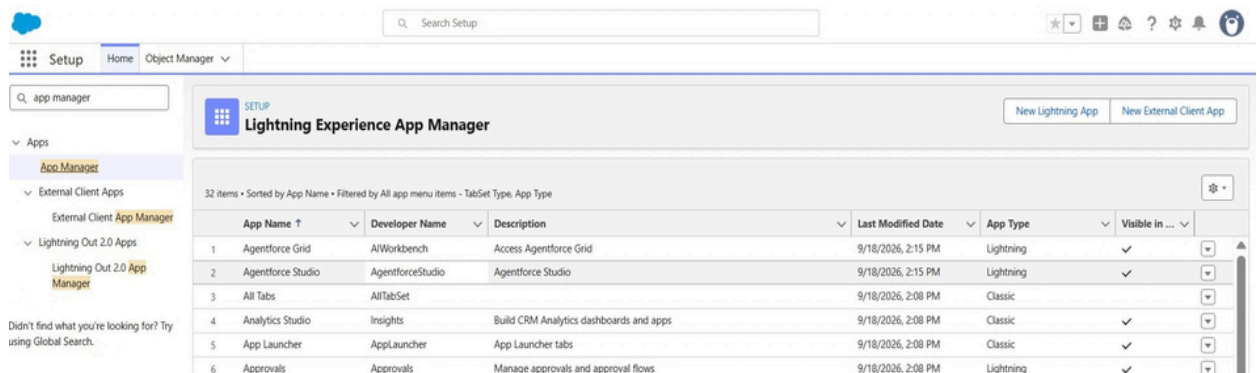

Milestone 3: Create Navigation Tabs

- Use the Quick Find search box to find Tabs.
- Under Custom Object definitions, create tabs for Employer, Customer, and Enterprise
- Select suitable Tab Styles, keep required visibility settings, and
- save the changes.

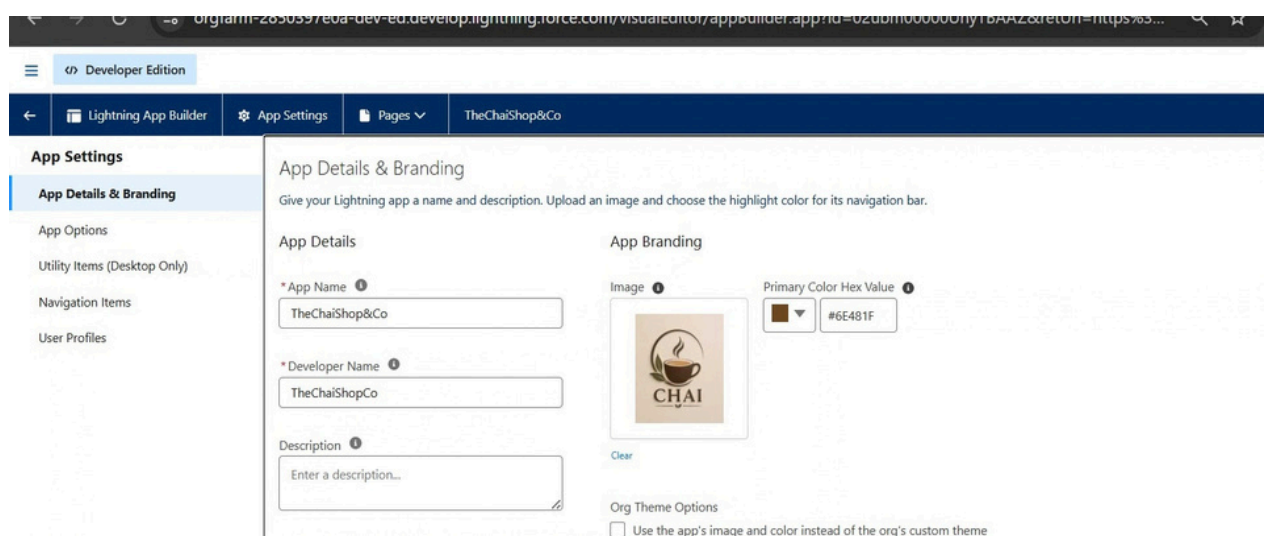

Milestone 4: Build the Custom Lightning App

- Open App Manager using the Setup search.
- Select New Lightning App.

- Enter "TheChaiShop&Co" as the application name and set branding options.
- Keep Standard Navigation and enable Desktop and Mobile.
- Add Customer, Employer, Enterprise, Reports, and Dashboards to the navigation bar.
- Give access to the System Administrator profile and complete the application setup.

Milestone 5: Create Global Value Sets (Picklists)

Activity 1: Create Global Picklist

- Search for "Picklist Value Sets" in Setup Quick Find and click New.
- Set up the Gender list: Label Gender; use the automatically filled Name; add Male, Female, and Others;
- Click Save & New.
- Create the Items list with products such as

Values :

- Platinum Tea Powder
- Double Delight Tea Powder
- Super Dust Tea Powder
- Osmania Biscuits (Value Pack)
- Osmania Biscuits (Premium Pack)
- Dry Fruit Biscuits
- Fruit Biscuits
- Salt Biscuits
- Multigrain Biscuits
- Ragi Biscuits
- Double Choco Chip Cookies
- Butter Almond Cookies
- Melting Moments Cookies
- Honey Oats Cookies
- Delight Box
- Signature Box
- Assorted Box

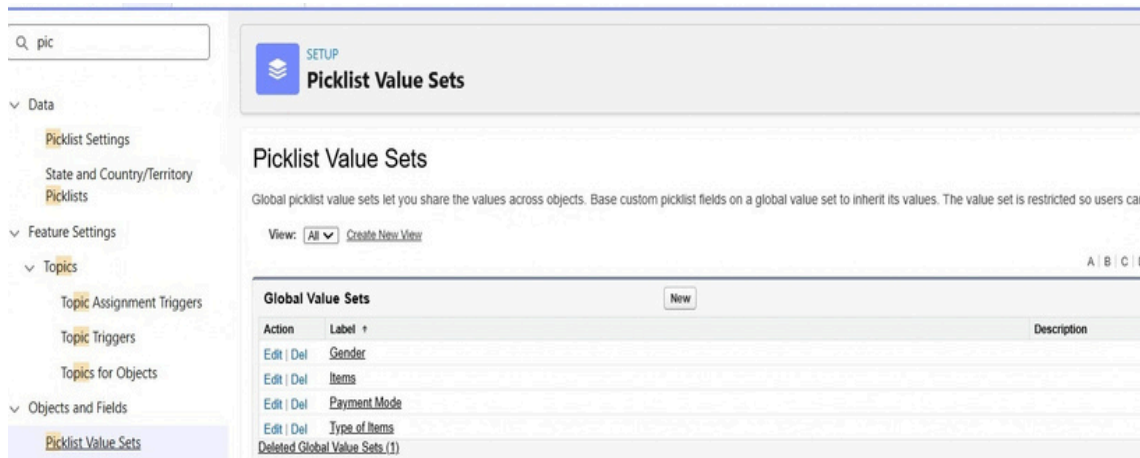

- Create Payment Mode with

Gpay, PhonePe, Paytm, Credit or Debit card, and Cash.

- Create Type of Items with

Tea powder,
Cookies, and
Gift Hampers.

- ClickSave when the last list is complete

Milestone 6: Create Fields and Database Relationships

- Click the Gear Icon (Setup) and go to the Object Manager.
- Search for and select the object (either Customer Account or Enterprise Account).
- Click on Fields & Relationships in the left sidebar, then click the New button.
- Choose a data type, Choosing a data type helps you format the field input.

Activity 1: Custom fields for Employer Account

- Open Employer Account in Object Manager.
- Click Fields & Relationships, then New.

- Create First Name and Last Name as Text, length 25, Required.
- Create Gender as Picklist using the Gender Global Value Set, Required
- Create Phone Number and Email ID using Phone and Email types, Required.
- Create Date of Birth as Date, Required.
- Create Aadhar Number and PAN Details as Text, lengths 12 and 10.
- Create Designation as Picklist with roles such as Manager, Cashier, and Servers.
- Create Salary as Currency.

Activity 2: Custom fields for Customer Account

- Create the following fields exactly as listed,
- Clicking Save & New after each one to move to the next:

Basic Text & Contact Fields:

- **First Name:** Choose Text as the Data Type. Set the Field Label to First Name, the Length to 25, and check the "Required" box.
- **Last Name:** Choose Text. Set the Field Label to Last Name, the Length to 25, and check the "Required" box.
- **Phone Number:** Choose Phone. Set the Field Label to Phone Number and check the "Required" box.
- **Email ID:** Choose Email. Set the Field Label to Email ID and check the "Required" box.
- **Address:** Choose Text. Set the Field Label to Address and the Length to 125.
- **Date of Birth:** Choose Date. Set the Field Label to Date of Birth and check the "Required" box.

Picklist (Dropdown) Fields:

- **Gender:** Choose Picklist. Set the Field Label to Gender. Choose "Use global picklist valueset" and select your Gender list from the dropdown. Check "Required".
- **Payment Mode:** Choose Picklist. Set the Field Label to Payment Mode. Use the global picklist value set for Payment Mode. Check "Required".
- **Type of Items:** Choose Multi-Select Picklist. Set the Field Label to Type of Items. Use the global picklist value set for Type of Items. Check "Required".

- **Products Purchased:** Choose Multi-Select Picklist. Set the Field Label to Products purchased. Use the global picklist value set for Items. Check "Required".
- **Chai:** Choose Multi-Select Picklist. Set the Field Label to Chai. Select "Enter values, with each value separated by a new line" and type out the following options:
 - TheChaiShop&Co Special Tea
 - Single Tea
 - Masala Tea
 - Lemon Tea
 - Ginger Tea
 - Green Tea
 - Sugar FreeTea

Relationship Field:

- **Associated Employer:** Choose Lookup Relationship. Set "Related To" as the Employer Account. Set the Field Label to Associated Employer.

Automation Formula Fields:

- **Birthday Checker:** Choose Formula. Set the Field Label to Date of Birthday is today?. Set Formula Return Type to Checkbox. Paste this formula: IF(AND(DAY(TODAY()) = DAY(Date_of_Birth__c), MONTH (TODAY()) = MONTH(Date_of_Birth__c)), TRUE, FALSE)
- **Order Quantity:** Choose Formula. Set the FieldLabel to Order Quantity. Set Formula Return Type to Number.
Enter Formula = Quantity (Number) =

- Click Save to finish.

Milestone 7: Design the User Interface Layouts

Activity 1 & 2: Online Orders and Walk-In Orders Layouts

- In Customer Account, open Page Layouts and select New.
- Name the first layout "Online Orders".
- Arrange fields into Customer Details, Order Details, and Employer Details sections and save.
- Create another layout named "Walk-In Orders", arrange the fields, and
- Click Save.

Milestone 8: Create different Record Types

Activity 1 & 2: Online and Walk-In Record Types

- In Customer Account, open Record Types and select New.
- Create "Online Order", mark it Active, and
- connect it to the Online Orders page layout.

Milestone 9: Add Data Validation Rules

Activity 1: Rules for Employer Account

- Open Employer Account and select Validation Rules > New.
- Rule 1: Check_Aadhar_Length — check that the field is not empty, contains exactly 12 numbers, and does not start with zero. Error: "Please enter a valid 12-digit Aadhar number starting with 1-9."
- Rule 2: Verify_PAN_Format — ensure the PAN is not blank, has exactly 10 characters, and contains no special symbols. Error: "A valid 10-character PAN is required."
- Rule 3: Validate_Contact_Number — ensure the phone number is exactly 10 digits with no spaces or dashes. Error: "Phone number must be exactly 10 digits long."

The screenshot displays the 'Validation Rules' configuration page for the 'Employer Account' object. The left sidebar shows the navigation menu with 'Details' selected. The main area shows a table of validation rules, sorted by Rule Name. The table has five columns: Rule Name, Error Location, Error Message, Active, and Modified By. There are three rules listed: Aadhar_Number, PAN_Number, and Phone_Number. Each rule has multiple error messages associated with it.

RULE NAME	ERROR LOCATION	ERROR MESSAGE	ACTIVE	MODIFIED BY
Aadhar_Number	Top of Page	Aadhar number is required.	✓	Naziya samreen H, 9/23/2026, 8:23 AM
		The Aadhar number must be 12 digits long.		
		Aadhar number can only contain numeric digits.		
PAN_Number	Top of Page	Aadhar number never starts with 0	✓	Naziya samreen H, 9/23/2026, 8:26 AM
		The PAN Details field must not be blank.		
		The PAN card number does not start with 0.		
Phone_Number	Top of Page	The PAN card number does not contain special characters.	✓	Naziya samreen H, 9/23/2026, 8:28 AM
		The phone number field must not be blank.		
		The phone number must consist of exactly 10 digits.		

(no spaces, dashes, parentheses, etc.)

- Repeat the same Phone Number validation rule for both the Customer Account and Enterprise Account objects so that phone numbers across the system stay formatted correctly

		The phone number field must not be blank.		

Milestone 10: Create HTML Email Templates

Activity 1: Create the Email Template

- Search for "Classic Email Templates" in Setup and
- click New.
- Choose the Text option.
- Name the template Customer_Birthday_Discount.
- Use a personalized birthday message offering 50% off the next order with promo code HBDAY50. Save the template.

Example Email

Hi {!Customer_Account__c.First_Name__c}, Wishing you a very Happy Birthday from the TheChaiShop&Co family! As a special gift, we are giving you 50% off your next order. Use the promo code HBDAY50 at the counter to claim your discount. Have a great day!

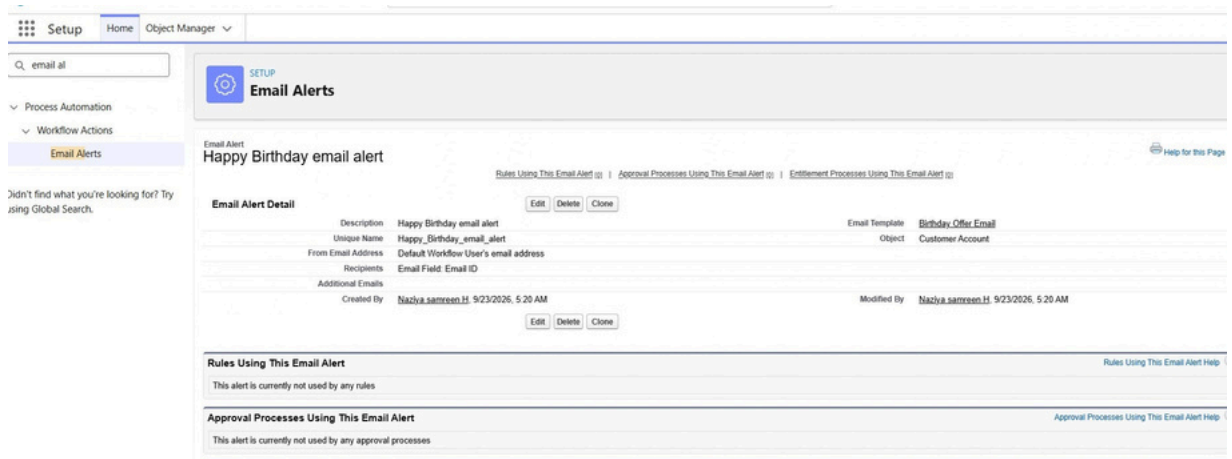

The screenshot shows the Salesforce Setup interface. On the left, the navigation menu includes 'Setup', 'Home', and 'Object Manager'. Under 'Email', 'Classic Email Templates' is selected. The main content area is titled 'Classic Email Templates' and shows a table of available templates. The table has columns for Action, Email Template Name, Template Type, Available For Use, Description, Author, and Last Modified Date. The table lists several templates, including 'Birthday Offer templates', 'Appointment for Unauthenticated User using Appointment Types - For Amazon China', and 'Group Service Appointments Enrollment Confirmation Email'.

Action	Email Template Name	Template Type	Available For Use	Description	Author	Last Modified Date
Edit Del	Birthday Offer templates	Text	✓		naz	9/23/2026
Edit Del	Appointment for Unauthenticated User using Appointment Types - For Amazon China	Custom	✓	Email template for confirmation of an appointment when appointments are scheduled using appointment types with third party video applications.	stfcdm	9/18/2026
Edit Del	Appointment for Unauthenticated User using Appointment Types - For third party	Custom	✓	Email template for confirmation of an appointment when appointments are scheduled using appointment types with third party video applications.	stfcdm	9/18/2026

Edit Del	Appointment for Unauthenticated User using Engagement Channels For third party	Custom	✓	Email template for confirmation of an appointment when appointments are scheduled using engagement channels with third party video applications.	stfcdm	9/18/2026
Edit Del	Birthday Offer Email	Text	✓		naz	9/23/2026
Edit Del	Cancelled Service Appointment Confirmation Email	Custom	✓	Email Template to confirm cancelling of a service appointment.	stfcdm	9/18/2026
Edit Del	Commerce Reorder Portal Invitation	Custom	✓	Invite a contact to a Commerce Reorder Portal.	autopro	9/18/2026
Edit Del	Customer Accounts Fields 1	Text	✓		naz	9/26/2026
Edit Del	Group Service Appointments Enrollment Confirmation Email	Custom	✓	Email Template to confirm enrollment of an attendee to a Group service appointment.	stfcdm	9/18/2026

Activity 2: Set Up Email Alert

- Search for "Email Alerts" in Setup and click New.
- Name it Send_Birthday_Discount_Alert and select the Customer Account object.
- Choose the birthday email template.
- Set the recipient to the Email ID field and

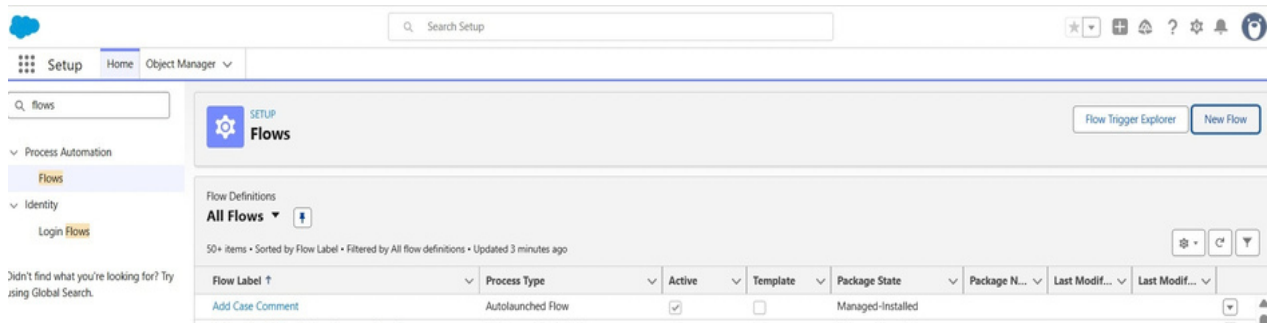

- Click save.

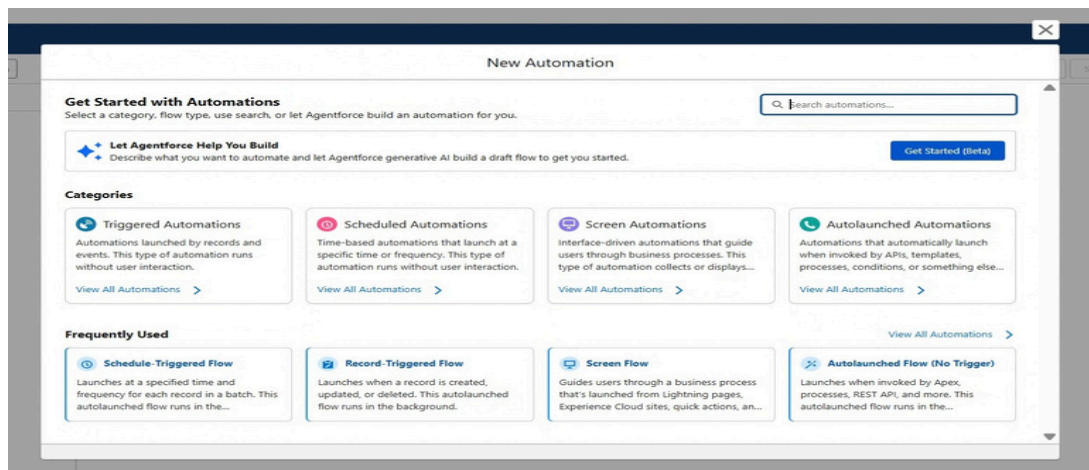

Milestone 11: Build Automated Flows

Activity 1: Build a Scheduled Flow

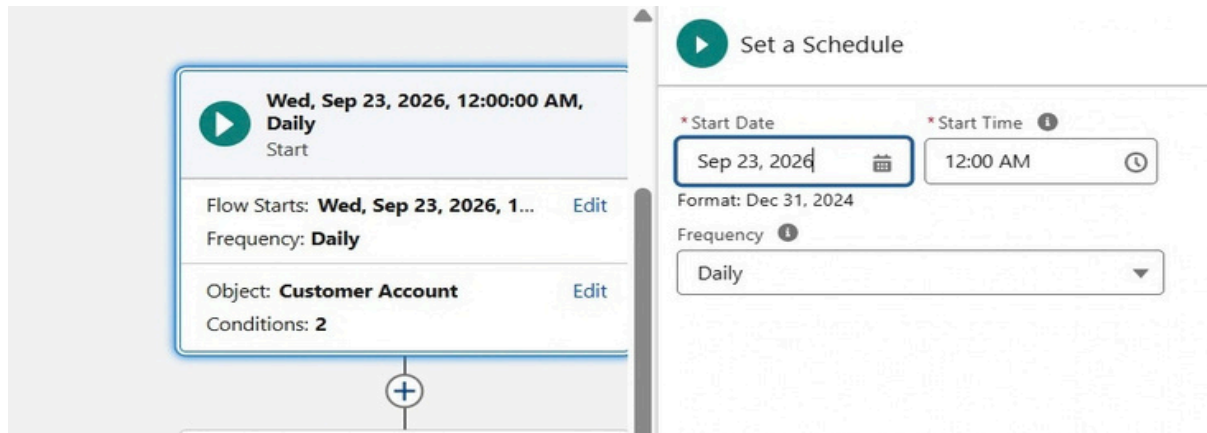

- Search for Flows in Setup and create a New Flow.

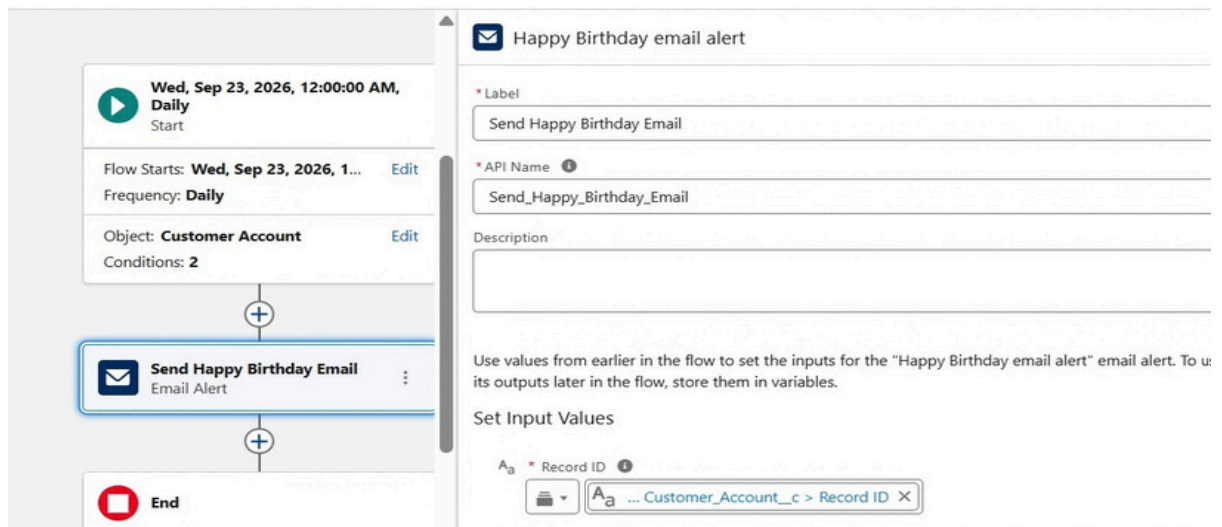

- Choose Schedule-Triggered Flow.

- Set the schedule to run daily at a specific time such as 12:00 AM.
- Select Customer Account as the object.
- Set conditions so the flow runs when Birthday is today? is True and Email ID is not blank.

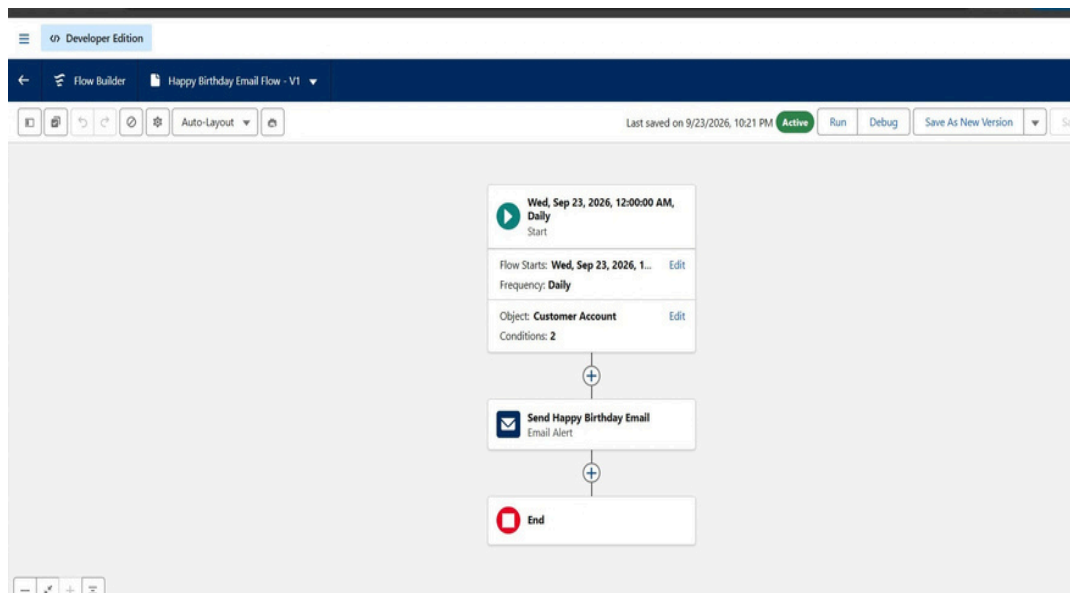

- Add an Action element to the flow canvas.
- Search for Email Alert and select Send_Birthday_Discount_Alert.
- Pass the Record ID into the action.
- Click Done, then Save and Activate the flow.

Flow Logic at a Glance

Daily Schedule → Customer Account → Birthday is today?
= True → Email ID is not blank → Send Birthday Discount
Alert → Complete

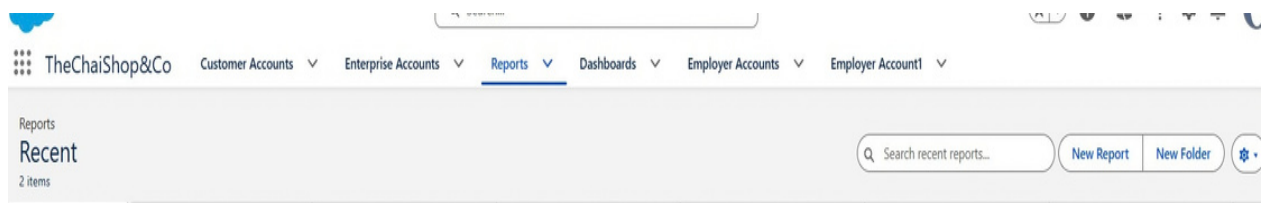

This sequence reduces repetitive manual work and supports timely customer communication.

Milestone 12: Create Reports and Dashboards

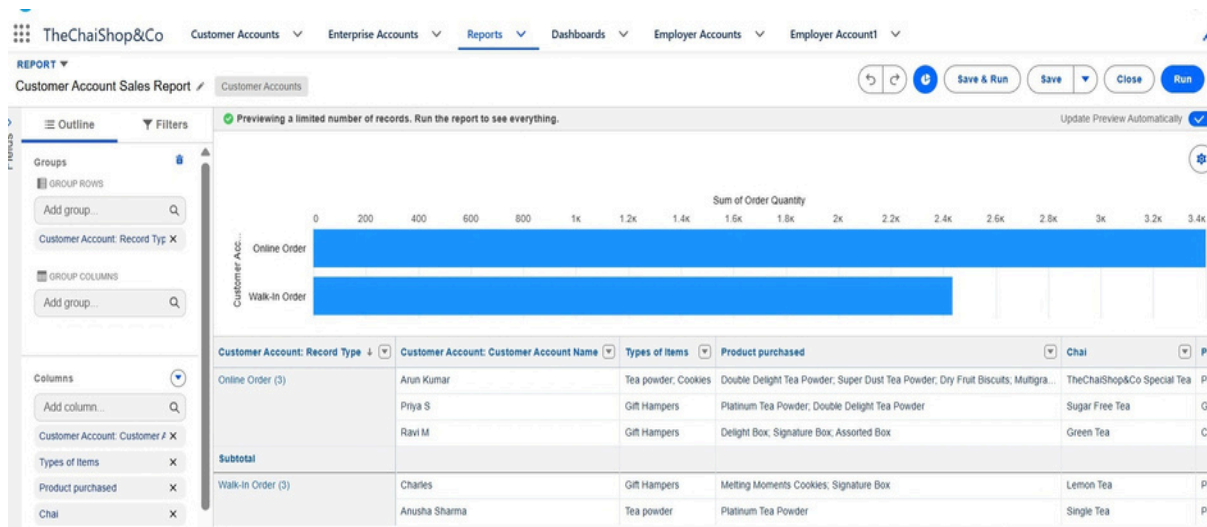

Activity 1 :Customer Sales Reports

- Open the TheChaiShop&Co app, go to Reports, and click New Report.

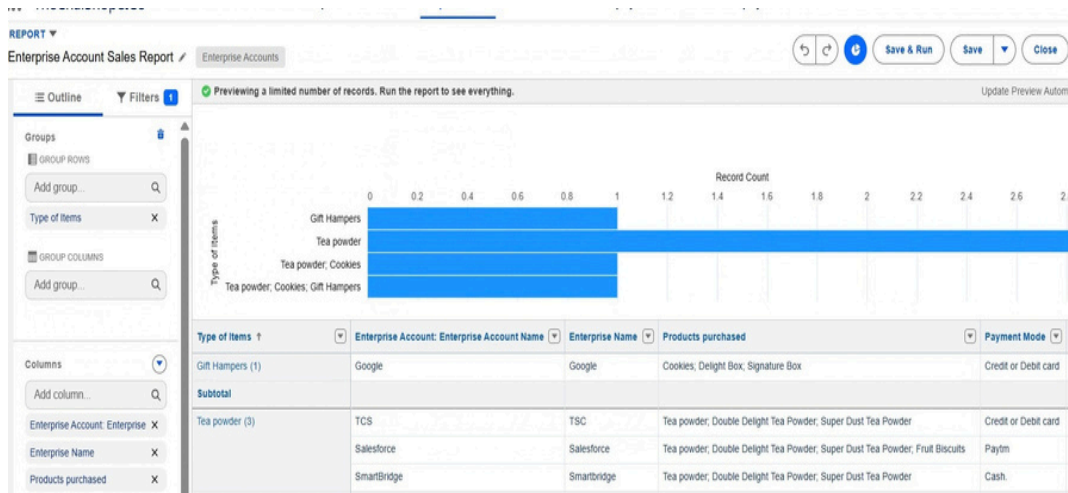

- Select Customer Accounts and create Customer Sales Tracker.
- Drag and Drop all the required Columns from the Outline pane.
- Group rows by Record Type (Online vs Walk-In) and add a chart.

- Save and Run.

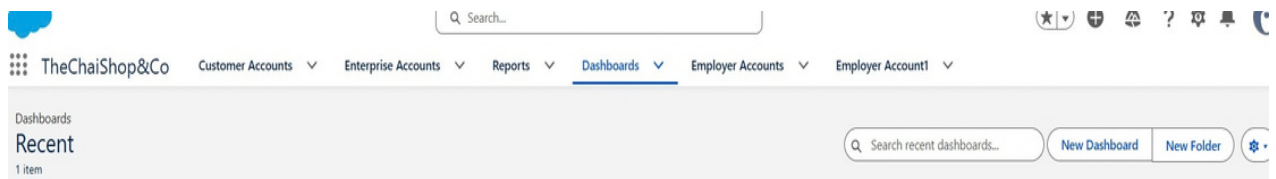

Activity 2 Enterprise Sales Reports

- Create a second report for Enterprise Accounts called B2B Enterprise Sales.
- Drag and Drop all the required Columns from the Outline pane.
- Group rows by Type of Items purchased and
- Save and Run

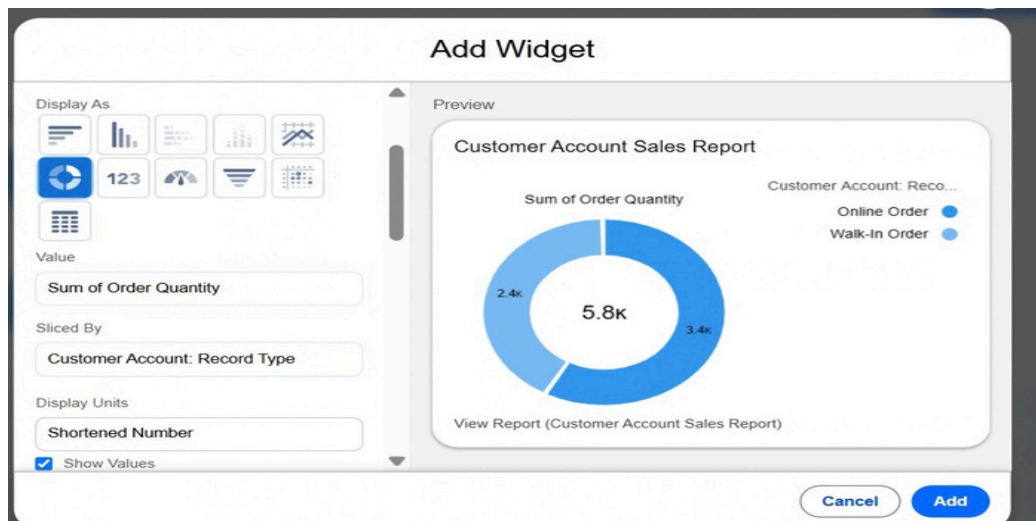

Activity 3: Create a Dashboard

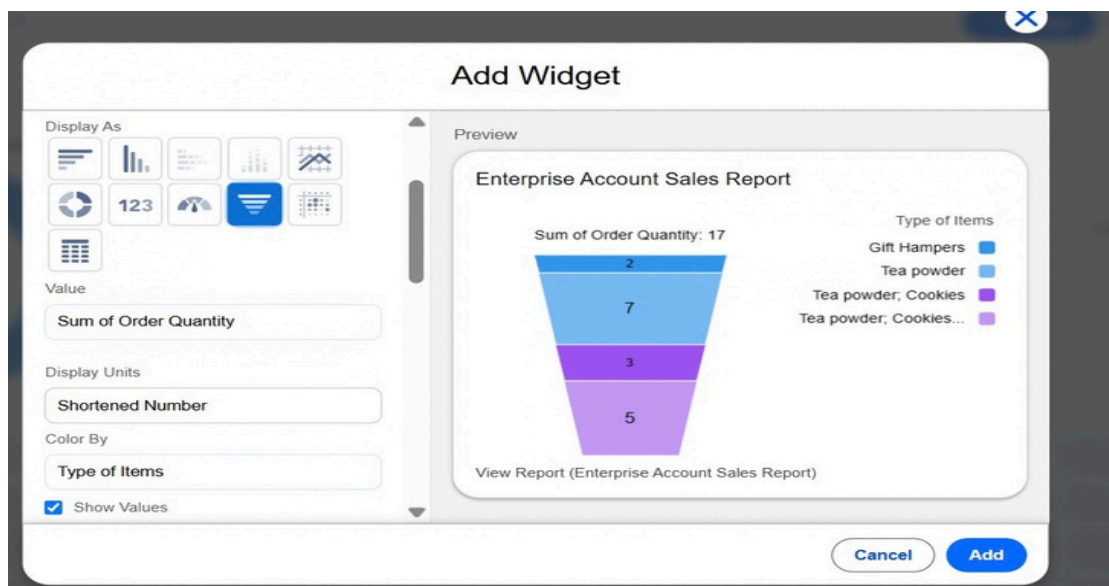

- Go to Dashboards and click New.

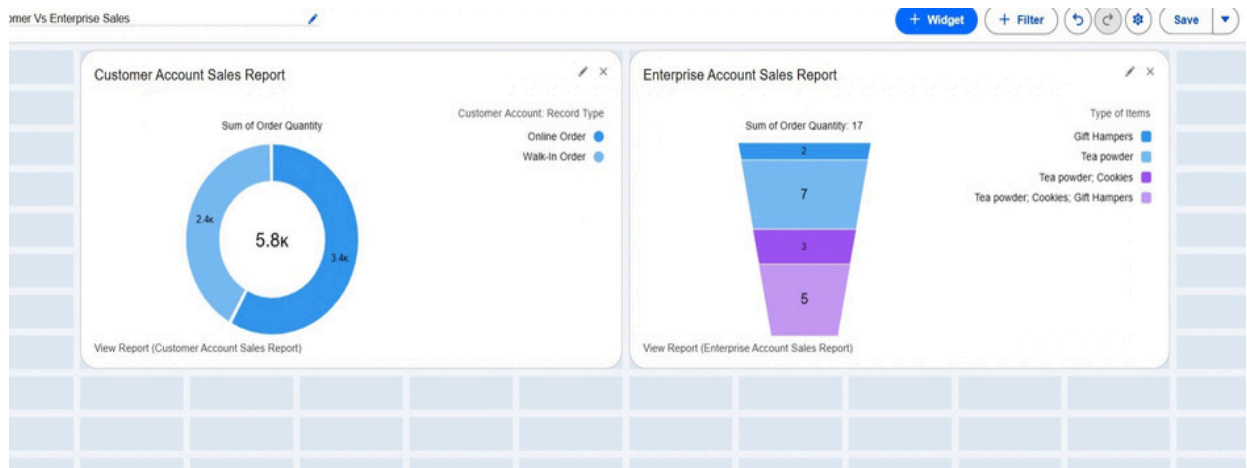

- Name the dashboard CustomerVsEnterprise Sales
- Click + Widget and select Chart or Table.
- Select Customer Account Sales Report

- Repeat the same steps for the Enterprise Account Sales Report.

- Arrange the charts side-by-side and
- Save.

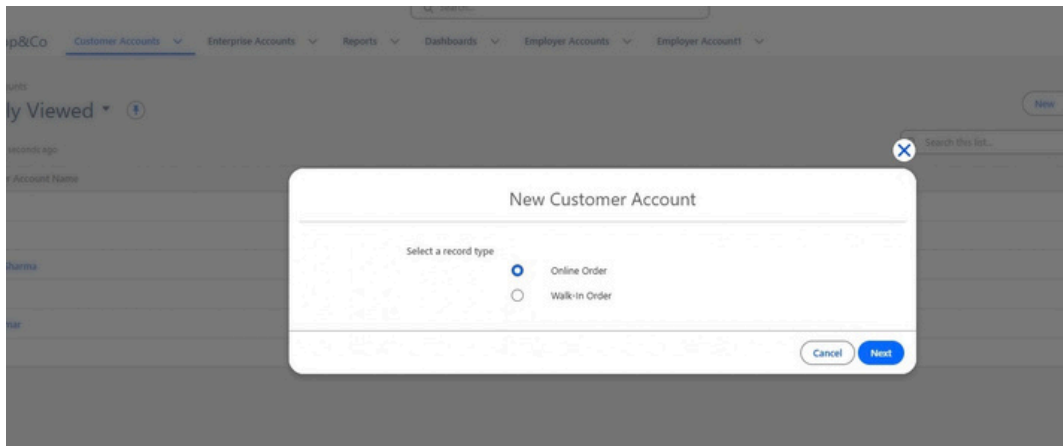

Milestone 13 - Conclusion

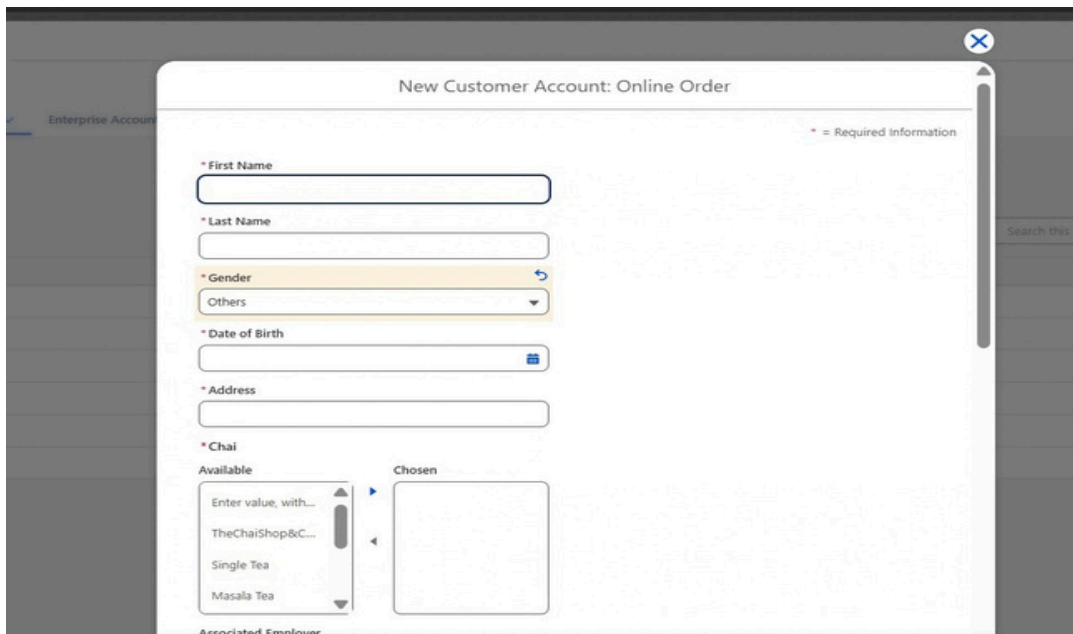

Building this CRM application for TheChaiShop&Co greatly improves how the store tracks its daily sales and customer details. By keeping online orders, walk-in customers, and corporate accounts in one centralized system, the business saves time. Automating billing calculations helps reduce human errors, while automated birthday emails support personalized customer communication and engagement.

7. FUNCTIONAL & PERFORMANCE TESTING

- The system was tested to ensure that the main functions work smoothly. The testing activities included
Creating dummy records for Customers, , accounts.

A screenshot of a web application interface showing a modal form titled "New Customer Account". The form is overlaid on a background that appears to be a list of customer accounts. The modal has a close button (X) in the top right corner. Inside the modal, there is a section labeled "Select a record type" with two radio button options: "Online Order" (which is selected) and "Walk-in Order". At the bottom of the modal, there are two buttons: "Cancel" and "Next".

A screenshot of a web application interface showing a modal form titled "New Customer Account: Online Order". The form is overlaid on a background that appears to be a list of customer accounts. The modal has a close button (X) in the top right corner. Inside the modal, there is a legend indicating that an asterisk (*) denotes required information. The form contains several input fields and a dropdown menu, all marked as required:

- * First Name: Text input field.
- * Last Name: Text input field.
- * Gender: Dropdown menu with "Others" selected.
- * Date of Birth: Text input field with a calendar icon.
- * Address: Text input field.
- * Chai: A section with two columns: "Available" and "Chosen". The "Available" column contains a list of items: "Enter value, with...", "TheChaiShop&C...", "Single Tea", and "Masala Tea". The "Chosen" column is empty.

At the bottom of the modal, there is a label "Associated Employer" followed by a text input field.

- Checking reports and dashboards for correct display of business information.

- Entering incorrect values to ensure Validation Rules blocked invalid Aadhar and phone numbers.

8. ADVANTAGES & DISADVANTAGES

Advantages

- All data is stored in one centralized and organized system.
- Manual mathematical errors are reduced through automated calculations

- Automated emails support customer engagement and personalized communication.
- Live dashboards make business information easier to understand.
- Reports reduce the time required to compile performance information

Disadvantages

- The store needs Salesforce licenses for continued use.
- The system requires a stable internet connection. Offline access is limited.

9. Conclusion

The CRM Application for TheChaiShop&Co integrates customer data, automates billing, and supports business reporting. The system reduces repetitive work, improves the consistency of information, and supports customer relationships through automation and analytics.

Overall Project Outcome

Area	Outcome
Customer	Centralized customer and employer information
Management Order	Structured order entry and automated calculations
Processing	Formula-based total bill calculation
Billing	Automated birthday email workflow
Communication Analytics	Reports and dashboards for business information

10. FUTURE SCOPE

- The CRM can be extended in future stages to support additional business needs.
- Mobile CRM integration for staff.
- AI-based sales prediction.
- WhatsApp/SMS alerts for customer communication.
- Inventory management for tea and biscuit stock levels.
- Multi-branch support.
