

Solution Requirements

Date	29 September 2026
Team ID	SWTID-2026-7510
Project Name	A CRM APPLICATION FOR THE CHAI SHOP & CO 4
Maximum Marks	Marks

Define Functional and Non-Functional Requirements:

Create a comprehensive list of requirements to define exactly what your solution will do and how well it will perform.

- **Functional Requirements (FR)** define specific behaviors, functions, or features of the system (What the system should do).
- **Non-Functional Requirements (NFR)** specify the criteria that judge the operation of a system, rather than specific behaviors (How the system should be).

Fill out the descriptions and necessary details for each category provided below.

Step 1: Functional Requirements (FR)

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
1	Authentication	Staff log in securely through the Salesforce Lightning login page using a unique username and password. Accounts are verified through a verification email, a secure password and security questions set during sign-up.	High
2	Authorization levels	System Administrator: full access to objects, app setup, reports and dashboards. Sales Representative / Retail Staff: create, view and update Customer, Employer and Enterprise records and orders. Store Manager / Business Analyst: view reports and dashboards. Access is controlled through profiles, permission sets and the Permissions Architecture.	High
3	External interfaces	No third-party API is required; the system runs fully on the Salesforce Platform (Lightning Experience, Flows, Email Alerts and Email Templates). Future scope: WhatsApp/SMS gateway for customer alerts.	Low
4	Transactions processing	Orders are captured on Customer Account (Online / Walk-In record types) and Enterprise Account records. Products, chai varieties, item types and payment mode (GPay, PhonePe, Paytm, Card, Cash) are chosen from global picklists. Order Quantity and Total Bill are calculated automatically using formula fields.	High
5	Reporting	Customer Account Sales Report (grouped by Online vs Walk-In), B2B Enterprise Sales Report (grouped by Type of Items), and the CustomerVsEnterprise Sales dashboard with donut and funnel charts for sales, revenue and customer information.	High

S.No	Requirement Category	Requirement Description	Priority (High/Medium/Low)
6	Business rules, etc.	Validation rules: Aadhar must be 12 digits and not start with 0; PAN must be 10 characters with no special symbols; phone must be exactly 10 digits. Key fields are mandatory. A scheduled Flow runs daily at 12:00 AM and, if Birthday is today = True and Email ID is not blank, sends the birthday email with 50% off (promo code HBDAY50).	High
7	Compliance to laws or regulations	Personal data (name, phone, email, DOB, Aadhar, PAN) must be handled as per India's Digital Personal Data Protection Act, 2023. Access to Aadhar and PAN is restricted to authorised roles, and promotional emails are sent only to customers who share their email.	Medium
8	Other	Custom objects (Employer, Customer, Enterprise Account) with a Lookup relationship, a custom Lightning App "TheChaiShop&Co" with navigation tabs, Page Layouts per record type, and data backup and restoration.	Medium

Step 2: Non-Functional Requirements (NFR)

S.No	NFR Category	Requirement Description	Target Metric / Acceptance Criteria
1	Performance & Speed	Pages, forms and dashboards load quickly; formula fields give instant billing at save time.	Record pages load in < 3 seconds; Total Bill calculated instantly on save
2	Scalability	The cloud platform grows with more users, more records and future branches without becoming slow.	Supports 50+ staff users and 10,000+ customer/order records
3	Security & Data Privacy	User-based access, secure login, protected cloud storage and backups protect business and customer data from unauthorised access.	100% of users authenticated; role-based access; data encrypted in transit (TLS)
4	Reliability & Availability	System remains available 24/7 with automatic saving, error handling, backup and disaster recovery on cloud hosting.	99.9% uptime per month; daily data backup
5	Usability & Accessibility	Simple interface, clear menus, easy forms and dashboards so staff need no advanced technical training; works on desktop and mobile.	New staff can create an order after ~30 minutes of training
6	Other	Maintainability and portability: configuration-based setup (objects, flows, layouts) that can be changed without code.	New field or picklist value added in < 1 day
