

Technology Stack

Date	29 September 2026
Team ID	SWTID-2026-7510
Project Name	A CRM APPLICATION FOR THE CHAI SHOP & CO
Maximum Marks	2 Marks

Define Your Technology Stack:

Identify the programming languages, frameworks, databases, front-end tools, back-end tools, and APIs that you will use to build your solution. A well-chosen technology stack ensures that your application is scalable, maintainable, and aligned with your project requirements.

Fill out the table below to detail the specific technologies chosen for each component of your architecture and provide a brief justification for your choice.

Technology Stack Details

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
1	Frontend / Client-Side (e.g., React, Angular, HTML/CSS)	Salesforce Lightning Experience (Lightning App, Page Layouts, Record Types)	No-code, responsive interface that works on desktop and mobile. Simple forms, clear menus and dashboards let staff use the CRM without technical training.
2	Backend / Server-Side (e.g., Node.js, Python/Django, Java)	Salesforce Platform (Flows, Formula Fields, Validation Rules)	Declarative logic with no server code to maintain. Formula fields calculate Order Quantity and Total Bill automatically, validation rules keep Aadhar, PAN and phone data correct, and Flows automate actions.
3	Database / Data Storage (e.g., MySQL, MongoDB, PostgreSQL)	Salesforce Cloud Database (Custom Objects, Fields, Global Value Sets, Lookup relationships)	Stores Customer, Employer and Enterprise Account records in one centralized relational structure. Global picklists keep data consistent, and built-in security, backup and recovery protect the data.
4	Cloud / Hosting / Deployment (e.g., AWS, Azure, Heroku, Docker)	Salesforce Developer Edition Org (cloud-hosted)	No server setup needed; the app is hosted on Salesforce cloud with 24/7 access, minimum downtime and easy scalability as users and data grow.

S.No	Architecture Component / Layer	Technology Chosen	Justification / Purpose
5	Version Control & CI/CD <i>(e.g., GitHub, GitLab, Jenkins)</i>	Salesforce Setup with Agile sprints (GitHub + Salesforce CLI as future scope)	Configuration was built directly in the Developer Org with work divided into sprints and tested at each stage. GitHub and Salesforce CLI can be added later for versioning and automated deployment.
6	Third-Party APIs / Other Tools <i>(e.g., Stripe, Twilio, Google Maps)</i>	No external API; Salesforce Email Templates, Email Alerts, Reports & Dashboards	Enables the automated birthday email (50% off, code HBDAY50) and sales analysis with the Customer Sales, B2B Enterprise Sales reports and dashboard. WhatsApp/SMS API is planned as future scope.
